## Customer Problem Statement Template

| | |
|---|---|
| **I am customer** | Attributes: IT Support Admin / End User facing technical issues. |
| **I'm trying to** | Leverage Flow Designer automation to classify tickets instantly by category/subcategory and assign them to the correct fulfillment teams. |
| **But(The Barrier/Problem)** | Manual processing creates bottlenecks, increases Mean Time to Resolve (MTTR), and leads to human error during ticket routing. |
| **Because(Root Cause)** | The current IT service desk process relies on manual inspection instead of automated triggers, dynamic keyword conditions, and Flow Designer logic. |
| **Which makes me feel** | Frustrated & Stressed: Support agents face high ticket queues and repetitive manual work. |
