Ideation Phase

Empathize & Discover

Date	28 september 2026
Team Id	6ab2215e11b716a3e52c637d
Project Name	Auto Ticket classification Using Flow designer
Maximum Marks	4 mark

Empathy Map Canvas

What do they THINK & FEEL?	**I spend too much time manually categorizing and routing tickets every day."**
What do they HEAR?	**From Management: "We need to reduce Mean Time to Resolve (MTTR) and improve SLA compliance."**
What do they SEE?	**High volume of incoming unstructured tickets in the system dashboard.**
What do they SAY & DO?	**Say: "We need an automated Flow Designer workflow to categorize tickets as soon as they are submitted." Do: Manually inspect ticket descriptions and assign them to IT teams.**
PAIN (Frustrations & Obstacles)	**Repetitive manual triage work causing agent burnout and high human error rates.**

PHASE 1: DEFINING AND CLASSIFYING

STEP 1: Define the Triage Challenge

PROBLEM STATEMENT: Describe the manual process bottlenecks here.

Manually reading ticket text is slow and leads to consistent misrouting and delays.

SETTING GOALS: Define the automated logic to replace manual triage.

Key flow objectives:

- **Target 90%+ accurate auto-classification using keyword and text analysis.**

STEP 2: Brainstorming Auto-Classification Rules

TICKET TEXT EXAMPLES	KEYWORD ANALYSIS RULES	CATEGORY / ROUTING	ACTIONS
Email from User: "I can't access Salesforce."	**Rule:** If short desc desc contains "Salesforce"	**Route:** Categorize as "CRM System / Software"	**Action:** Send email ACK to user.
		Route: Categorize as "CRM Developeres / Software"	**Action:** Send email ACK to user.

PHASE 2: OPTIMIZATION

STEP 3: Idea Prioritization for Flow Features
