Scalability & Future Plan:

Date	15 February 2025
Team ID	6ab2215e11b716a3e52c637d
Project Name	Auto ticket classification using flow designer
Maximum Marks	5 Marks

Scalability & Future Plan

The proposed ticket management solution is designed to support future growth and increasing ticket volumes. The system can be extended with additional automation, integrations, and intelligent classification capabilities without significantly changing the existing workflow.

Scalability:

- Support increasing numbers of tickets and users.
- Add new ticket categories, assignment groups, and business rules as requirements evolve.
- Extend Flow Designer workflows to automate additional service management processes.
- Integrate with external applications and communication platforms.
- Maintain consistent ticket classification and routing across different teams.

Future Enhancements:

- Introduce AI/ML-based ticket classification for more accurate categorization.
- Implement predictive priority and assignment recommendations.
- Add automated responses for frequently reported issues.
- Integrate dashboards and analytics for monitoring ticket trends and SLA performance.
- Enable intelligent knowledge-base recommendations based on ticket content.
- Continuously improve classification rules using historical ticket data.
