Functional & Performance Testing Template
Model Performance Test

Date	28 September 2026
Team ID	6ab2215e11b716a3e52c637d
Project Name	Auto Ticket Classification Model
Maximum Marks	10 Marks

Test Scenarios & Results

Test Case ID	Scenario (What to test)	Test Steps (How to test)	Expected Result	Actual Result	Pass/Fail
FT-01	Valid Ticket Text Classification	Enter a valid customer support ticket and click Classify.	Ticket is accepted and the correct category is predicted.	_____	____
FT-02	Empty Ticket Input Validation	Leave the ticket text field empty and click Classify.	Validation message is shown and no classification is generated.	_____	____
FT-03	Invalid / Very Short Input	Enter incomplete or meaningless ticket text and submit.	System handles the input safely and shows a suitable message/result.	_____	____
FT-04	Multiple Ticket Categories	Enter sample tickets from different predefined categories.	Each ticket is classified into its corresponding category.	_____	____
FT-05	Prediction Result Display	Submit a valid ticket and observe the prediction output.	Predicted category and confidence/probability are displayed clearly.	_____	____
PT-01	Response Time Test	Enter a ticket and measure the time taken to generate the prediction.	Prediction is returned within an acceptable time.	_____	____
PT-02	Multiple Ticket Load Test	Classify multiple tickets one after another.	Model continues to classify tickets without crashing or slowing significantly.	_____	____
PT-03	Dataset / Batch Prediction Test	Provide a batch of ticket records for prediction.	All valid records are processed and classified successfully.	_____	____

Note: Fill the Actual Result and Pass/Fail columns after testing the Auto Ticket Classification Model.
