Project Development Phase
Model Performance Test

Date	28 September 2026
Team ID	6ab2215e11b716a3e52c637d
Project Name	Auto Ticket Classification Using Machine Learning
Maximum Marks	

Model Performance Testing:

Project team shall fill the following information in model performance testing template.

S.No.	Parameter	Values	Screenshot
1	Model Summary	Auto ticket classification model built using a text classifier (TF-IDF + Logistic Regression / Naive Bayes). It reads the ticket subject and description and predicts the category (e.g., Hardware, Software, Network, Access) and priority automatically, so tickets are routed to the correct support team. Note: Tickets with missing or invalid data will show an error; correctly formatted tickets are classified and assigned.	[Insert screenshot of model summary / code output]
2	Accuracy	Training Accuracy - 95% Validation Accuracy - 92% (Replace with your actual values from the model output)	[Insert screenshot of accuracy result / classification report]
3	Confidence Score (Only Yolo Projects)	Class Detected - Predicted ticket category (e.g., Network Issue) Confidence Score - Model is 90% sure the ticket is correctly classified (Not applicable if you are not using a YOLO project)	[Insert screenshot of a sample ticket prediction with confidence]
