1. Introduction

- **Project Title:** Auto Ticket Classification Using Flow Designer
- **Team Members:** List team members and their roles
- **Technology/Platform:** ServiceNow, Flow Designer

2. Project Overview

- **Purpose:** Automatically classify incoming tickets and route them to the appropriate support team using Flow Designer.
- **Features:**
    - Automatic ticket classification
    - Category identification
    - Automatic assignment group selection
    - Priority-based routing
    - Reduced manual ticket handling
    - Faster ticket processing

3. Architecture

- **Platform:** ServiceNow
- **Automation:** Flow Designer
- **Ticket Source:** Incident/Ticket Management
- **Classification Logic:** Conditions, rules and flow actions
- **Assignment:** Appropriate assignment group based on ticket information

4. Setup Instructions

- **Prerequisites:**
    - ServiceNow instance
    - Appropriate user/admin access
    - Flow Designer access
    - Incident Management module
- **Installation/Configuration:**

1. Create/configure ticket fields.

2. Define classification conditions.
3. Create Flow Designer flow.
4. Configure actions and assignment groups.
5. Activate and test the flow.

5. Flow Structure

Instead of MERN's Client/Server folder structure, project:

- **Trigger:** Ticket/Incident creation or update
- **Conditions:** Analyze ticket information
- **Classification:** Identify ticket category/type
- **Actions:** Update category, priority and assignment group
- **Output:** Automatically classified and assigned ticket

6. Running the Application

Explain how to test/run the flow:

1. Create a new ticket.
2. Enter ticket description/details.
3. Flow Designer is triggered.
4. Classification conditions are evaluated.
5. Category/assignment group is automatically updated.
6. Verify the final ticket.

7. Flow Documentation

- Flow Name
- Trigger
- Conditions
- Flow Actions
- Assignment logic
- Expected output

Example:

Ticket Created → Flow Trigger → Check Description/Category → Apply Condition → Set Assignment Group → Update Ticket

8. Authentication & Authorization

- ServiceNow user authentication
- User roles and permissions
- Access to Incident Management
- Flow Designer permissions
- Role-based access control

9. User Interface

Include screenshots of:

- Ticket creation page
- Incident form
- Flow Designer
- Classification conditions
- Automatically assigned ticket
- Final result

10. Testing

Describe:

- Functional testing
- Different ticket categories
- Correct assignment testing
- Invalid/unknown ticket testing
- Priority testing
- Flow execution testing

11. Screenshots or Demo

Include:

- Flow Designer screenshot
- Ticket creation screenshot

- Classification result
- Assignment group result
- Before/after screenshots
- Demo video/link if available

12. Known Issues

For example:

- Unclear ticket descriptions may not match a classification rule.
- New ticket types may require additional conditions.
- Changes in classification requirements may require flow modification.

13. Future Enhancements

- AI-based ticket classification
- NLP-based ticket understanding
- Automatic priority prediction
- More advanced routing rules
- Integration with chatbot
- Analytics dashboard
- Self-learning classification system
