1. INTRODUCTION

1.1 Project Overview

- Auto Ticket Classification system overview
- Ticket management and classification process
- Flow Designer automation

1.2 Purpose

- Manually ticket classification time delay-
- Tickets-ஐ automatically appropriate category/assignment group route
- Service desk efficiency-ஐ improve

---

2. IDEATION PHASE

2.1 Problem Statement

- Tickets manually classify
- Wrong category / assignment delay
- Large number of tickets handle difficulty
- Repetitive manual work

2.2 Empathy Map Canvas

- **Users:** Service Desk Agents / IT Support Team / Employees
- **Says:** “My ticket is not assigned to the correct team”
- **Thinks:** “Why is my ticket taking so long?”
- **Does:** Creates and follows up on tickets
- **Feels:** Frustrated due to delays

2.3 Brainstorming

Possible solutions:

- Rule-based ticket classification
- Keyword-based classification
- Automatic assignment
- Priority-based routing

- Flow Designer automation

---

3. REQUIREMENT ANALYSIS

3.1 Customer Journey Map

Ticket creation → Ticket analysis → Classification → Assignment → Resolution → Closure

3.2 Solution Requirement

- Ticket details should be captured
- Ticket category should be identified automatically
- Appropriate assignment group should be selected
- Priority should be assigned where required
- Agent should receive correctly classified ticket

3.3 Data Flow Diagram

User → Create Ticket → Flow Designer → Analyze Ticket Information → Classify Ticket → Assign Group → Update Ticket → Agent

3.4 Technology Stack

Depending on your actual implementation, you can mention:

- **Platform:** ServiceNow
- **Automation:** Flow Designer
- **Database:** ServiceNow Database
- **Ticket Management:** Incident Management
- **Scripting:** JavaScript *(if used)*
- **Testing:** ServiceNow Test/Instance environment

---

4. PROJECT DESIGN

4.1 Problem Solution Fit

Explain how the proposed Flow Designer solution addresses:

- Manual classification
- Incorrect assignment

- Processing delays
- Repetitive tasks

4.2 Proposed Solution

The proposed system automatically analyzes newly created tickets and classifies them based on predefined conditions/rules. Flow Designer triggers the required actions and routes the ticket to the appropriate assignment group.

4.3 Solution Architecture

User
↓
ServiceNow Incident/Ticket Creation
↓
Flow Designer Trigger
↓
Ticket Information Analysis
↓
Classification Logic
↓
Category / Assignment Group / Priority
↓
Ticket Updated Automatically
↓
Assigned Support Team

---

5. PROJECT PLANNING & SCHEDULING

5.1 Project Planning

Phase	Activities
Phase 1	Problem Identification
Phase 2	Requirement Analysis
Phase 3	Flow Design
Phase 4	Flow Designer Implementation
Phase 5	Testing
Phase 6	Performance Evaluation

Phase	Activities
Phase 7	Documentation

---

6. FUNCTIONAL AND PERFORMANCE TESTING

6.1 Performance Testing

Test cases can include:

Test Case	Input	Expected Result
TC01	Hardware-related ticket	Hardware team assigned
TC02	Software-related ticket	Software team assigned
TC03	Network-related ticket	Network team assigned
TC04	Unknown/general ticket	Default group assigned
TC05	High-priority ticket	Appropriate priority applied

Also mention:

- Classification accuracy
- Flow execution time
- Correct assignment
- Handling of invalid/missing information

---

7. RESULTS

7.1 Output Screenshots

இந்த section-la உங்க actual project screenshots போடலாம்:

1. Ticket creation screen
2. Flow Designer flow
3. Classification condition
4. Automatically updated category
5. Assignment group result
6. Final classified ticket

8. ADVANTAGES & DISADVANTAGES

Advantages

- Reduces manual effort
- Faster ticket assignment
- Consistent classification
- Reduces human errors
- Improves support team productivity
- Automates repetitive tasks

Disadvantages

- Depends on predefined classification rules
- Complex tickets may require manual intervention
- Initial flow configuration requires effort
- Changes in ticket patterns may require rule updates

---

9. CONCLUSION

The **Auto Ticket Classification using Flow Designer** system automates the classification and routing of support tickets. By using ServiceNow Flow Designer, tickets can be processed based on predefined conditions and automatically assigned to the appropriate support team. This reduces manual effort, improves ticket handling speed, and provides a more consistent ticket management process.

---

10. FUTURE SCOPE

- AI/ML-based ticket classification
- Natural Language Processing for understanding ticket descriptions
- Automatic priority prediction
- Sentiment analysis
- Self-learning classification system
- Integration with chatbot

- Predictive ticket routing

---

11. APPENDIX

Source Code (if any)

- JavaScript / scripts used in the project

Dataset Link

- Dataset used for ticket classification *(if applicable)*

GitHub & Project Demo Link

- GitHub repository
- Project demonstration link
- ServiceNow project screenshots/documentation
